## RUT Validation

RUT number is as unique identification field for vendors. It requires to be well entered since it has a specific format. Because of this, it has been added a digit validator that alerts in case of duplicity or errors during the creation of these entities.

The control digit algorithm is the same used for validating RUN or RUT numbers. Both, The National Unique Role and the Tax Unique Role, have a control digit that helps avoiding deception and identity theft (in case of natural person, these 2 keys are the same). Both have the same numeric structure: XX.XXX.XXX - Y

The control digit is obtained from an algorithm known as Module 11. The Module 11 consists on an arithmetic operation applied to each digit of the RUT.

The screenshot shows a 'VENDOR CARD' form for 'LOCCLVEND1 · LocCL Test Vendor Corporation S.R.L.'. The form includes a navigation bar with options like 'Process', 'Request Approval', 'New Document', 'Navigate', 'Vendor', and 'More options'. A red box highlights the 'Invoicing' section, which contains a 'VAT Registration No.' field with the value '765325390' and a 'Prices Including VAT' toggle switch.
